EDUCATION / CERTIFICATES

Computer Science Major @ University of British Columbia

Sept. 2025 - Expected Graduation in 2029

GPA: 3.75; Dean's List | relevant coursework : **DSA, OOP, Software Development, Software Engineering**

Vertex School | AI Game Development BootCamp

Sept. 2026 - Expected Nov. 2026

- Developing **2 playable games** over a **10-week** bootcamp by applying **Unreal Engine, UEFN, C++, Verse**, gameplay architecture, and multiplayer systems.
- Expanding game-development workflows with **procedural content generation, Unreal MCP automation, and generative AI integration.**

Amazon Professional Junior Software Development Certificate

Expected Sep. 2026

Google AI Professional Certificate

Expected Sep. 2026

TECHNICAL PROJECTS

Pawn Escape | Itch.io: [Pawn_Escape](#) / Github: [Pawn_Escape](#) / GMTK Game Jam - **10,500+** entries | **Unity** / **C#** • Implemented a **turn-based tactics engine** supporting player, enemies, pickups, and cooldowns by combining **BFS movement, an FSM-driven turn system, and multi-system undo/rewind.**

- Reduced tile collision lookups to **O(1)** by layering **dictionary-backed occupancy queries** over Unity's Tilemap API. • Eliminated per-frame UI polling by building an **event-driven card-hand interface** with runtime layout scaling. • Covered edge cases in state and rewind behavior by using **structured playtesting** without an automated test suite.

Guess the Weight | Itch.io: [Guess The Weight](#) / Github: [Guess the Weight](#) / Kenney Jam - **600+** entries | **Unity** / **C#** • Delivered a complete physics-based puzzle game in **48 hours** for a **600+ entry game jam** by solo-developing around the "SCALE" theme with Kenney assets.

- Enabled reusable level authoring and responsive interactions by building a **physics-simulated balance scale, data-driven level pipeline, event-driven item/UI system, and custom editor tool.**

Lumi the Forgotten Moon | Github: [Lumi-and-the-Forgotten-Moon](#) / **Unity** / **C#** | **Clip Studio Paint Pro**

- Improved control responsiveness across movement states and transitions by implementing an **FSM player controller with queue-based input buffering.**
- Reduced gameplay coupling by separating **movement, input, state logic, and behaviors** into focused components using the **Single Responsibility Principle.**

My Personal Website | [My Website](#) / **TypeScript** / **React** / **HTML** / **CSS**

- Showcased game projects through a **React/TypeScript** portfolio with typed project data, category filtering, token-based CSS theming, and a custom **YouTube IFrame API** music player.

TECHNICAL SKILLS

Programming Languages: C#, C++, Verse, C, Java, TypeScript

Game Development and Tooling: Unity, Unreal Engine, UEFN, Unity Editor Tooling, Unity Physics, Tilemaps, Blender

Gameplay / Software Concepts: FSMs, BFS / Pathfinding, OOP, DSA, Event-Driven Systems, Design Patterns

AI-Assisted / Agentic Workflow: Claude via Unity MCP, Unreal MCP

Developer Tools: GitHub, Git

EXPERIENCE

AllSet Learning / *Math, English Tutor* **October 2025 - Present** • Earned management recognition as a **top-performing mathematics tutor** by tutoring students and communicating detailed progress and learning needs.

Alphaville American Private School / *Teaching Assistant, File Manager* **July 2023 - July 2024** • Supported school operations by formatting

assignments, exams, report cards, and other **Microsoft Word** documents and preparing principal-facing classroom reports.
