ANGUS CHOU

(778) 668-0388 | tsuki9355@gmail.com | Portfolio | GitHub | LinkedIn

EDUCATION

Science Co-op | Computer Science Major @ University of British Columbia **Sept. 2025 - Expected Graduation in 2028**
Dean's List | GPA: 3.8 | Coursework: Software Engineering, Object-Oriented Programming, Data Structures & Algorithms

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, SQL, C#
Frameworks & Cloud: React, Spring Boot, JDBC, MySQL, AWS (Elastic Beanstalk, RDS)
Tools & Concepts: Git, Rest APIs, Bash, TDD, Agile/SDLC, OOP, Data Structures& Algorithms
Testing: JUnit, Mockito, Vitest, React Testing Library

TECHNICAL PROJECTS

Expense Tracker | Full-Stack Web Application | *React, TypeScript, Java, Spring Boot, MySQL, AWS*| **GitHub**

- Built a full-stack expense tracker with React + TypeScript frontend and a layered Spring Boot REST API (controller, service, repository), using JDBC SQL queries with SUM / GROUP BY aggregation for spending summaries.
- Designed an accessible, responsive UI with labelled form, screen-reader error announcements, keyboard focus states, and dark mode to record expenses, browse history, and visualize category spending.
- Wrote 18 automated tests across the stack: JUnit and Mockito for business rules and SQL, Vitest and React Testing Library for UI behavior.
- Deployed the frontend and API as a single artifact to AWS Elastic Beanstalk with Amazon RDS MySQL, using Spring profiles and environment variables for configuration.

Mini Dungeon Adventure | *C++, STL, Visual Studio, Git* | **GitHub**

- Developed a turn-based dungeon crawler in C++ using inheritance and enum-driven item effects.
- Implemented level-scaled enemy encounters using weighted random selection and progression-based monster.
- Used STL containers and algorithms (std::map, std::find_if, std::sort) for inventory management, item lookups, and persistent leaderboard rankings.

My Personal Website | *TypeScript, React, Vite, CSS, Node.js* | **Portfolio** | **GitHub**

- Built a responsive portfolio in React 19 and TypeScript with Vite, using a component-based architecture and data-driven content for projects and experience.
- Integrated the YouTube IFrame API into a custom music player with play/pause, track skipping, and auto-advance, using refs to avoid stale state in the player's event callbacks.

Zoo Manager | *Java, Swing, JUnit, JSON* | **GitHub**

- Engineered a Java zoo management application with 12+ features, designing an object-oriented domain model shared across SWING and command-line interfaces.
- Implemented JSON-based state persistence and developed 73 JUnit tests to validate logic, application behavior, and state transitions.

ADDITIONAL TRAINING

Amazon Software Development Certificate | Certificate **Oct 2026**

- Curriculum covered: software development practices across SDLC by applying OOP, SQL/JDBC, TDD, Spring Boot, REST APIs, AWS cloud deployment.

EXPERIENCE

UBC Game Development Club | Main Programmer **September 2026 - Present**

- Serving as main programmer for the UBC Winter 2026 game project, with responsibilities spanning gameplay system development, peer code reviews and feedback-driven iteration.
- Collaborated with 10+ team members across different disciplines.

AllSet Learning | Math, English Tutor **October 2025 - Present**

- Earned management recognition as a top-performing mathematics tutor by tutoring students and communicating detailed progress and learning needs.
